

MODULAR HOUSE

The timber structure was designed by Florin Baeriswyl of dai ag who teamed up with Holzbau Schoeb for realization. The elements were CNC-machined and prewired which enabled quick assembly with low tolerances. The system offers possibilities for customizing coupled with price stability. The perfection of imperfection: Finishes have been minimized with a single treatment used for all surfaces. The concrete floor was cast in-situ. The matte, imperfect treatment of the walls feels perfect and already creates a comforting ambiance despite its newness.
